

FLOWSCAPE APP DISTRIBUTION MANUAL

Quick Guide For Clients

Android & iOS App

DOWNLOAD & DISTRIBUTE YOUR iOS APP

Please note: Clients who don't intend on distributing apps via an EMM Provider (MDM Solution) can download the iOS app directly from Appstore

The iOS app is now available on Apple App store and can be installed directly from there.

This App can also be linked to your EMM system if you are setup to work with this.

What is MDM/EMM? Mobile device management (*MDM*) is a term for administration of mobile devices. MDM is usually implemented for a third-party product that includes management features for mobile device vendors. Clients wishing to distribute their application via MDM must have their EMM vendor of choice integrated into the Flowscape application.

DOWNLOAD & DISTRIBUTE YOUR ANDROID APP

Please note: Clients who don't intend on distributing apps via an EMM Provider (MDM Solution) can download the Android app directly from Google Play

Enroll

- Enroll in Android for Work [here](#)
- Choose either Managed Google Play Accounts **or** Managed Google Account (*most common*)
- Verify the domain
- Create a Service Account
- Bind a Third Party EMM provider (*required info is found in above link*)

Purchase

- [Create your](#) Managed Google Play store
- [Manage](#) Free Apps (*Select and Approve*)

Distribute

- Distribute your App via your EMM provider
- For further instructions how to distribute Android Apps using EMM, check with your EMM provider

Read more on how to download and distribute the Android app [here](#)

ANDROID DISTRIBUTION ALTERNATIVES

You can distribute the Android app via:

- **MDM Solution** – If the client has installed an EMM Provider
- **Google Play** – Client employees simply download the Android app from Google Play as any other app. This solution does not require the client to setup Google For Works

What is MDM/EMM? Mobile device management (*MDM*) is a term for administration of mobile devices. MDM is usually implemented for a third-party product that includes management features for mobile device vendors. Clients wishing to distribute their application via MDM must have their EMM vendor of choice integrated into the Flowscape application.

Supported EMM Providers

SUPPORTED EMM VENDORS AND MDM CONFIGS

The Flowscape app supports configuration parameters and app tunnelling of traffic according to the appconfig.org community. These functions and more are supported on the following EMM platforms out of the box:

IBM Maas360, Jamf, MobileIron, AirWatch, SOTI MobiControl, Blackberry, Enterprise Mobility Suite, Cortado Corporate Server, Matrix42, SimpleMDM, 42Gears SureMDM, AppTec360, Snow Device Manager, Pulse Secure Workspace, Centrify, Baramundi Software, Cisco Meraki, SAP, Seven Principles, Sophos

The following parameters need to be set in the MDM Tool for the fields to be pre-filled in the app, removing the need for users to set these fields when using the app for the first time:

IOS:

- Server
- Port

Android:

- argusAddress
- argusPort

Please contact Flowscape if you do not know your server address and/or port.

Thank you!
